MOLLIS® –
PRODUCT INFORMATION
AND CARE INSTRUCTIONS

CONGRATULATIONS!

On your fantastically comfortable MOLLIS® from KLAFS! We hope you really enjoy them and always wish you a pleasant sauna bath.

Why always lie down on wood in the sauna when there's a soft and comfortable option instead? This question had occupied us at KLAFS for a long time, until our engineers developed MOLLIS®, a textile range that feels ideal in sauna conditions – and is designed especially for the cushions to be used up close against your skin, enabling you to enjoy your new sauna comfort without any worries at all.

You will find useful information about this on the following pages.
And what you should remember when caring for your MOLLIS® so that you can enjoy the products for as long as possible.

TENCEL™ – THE STUFF THAT SAUNA DREAMS ARE MADE OF

The starting material for any textile is always the fibre. In our case, it is innovative Tencel™ – a wood fibre made from natural raw materials, which is used to manufacture the MOLLIS® covers.

It comes from sustainable forestry and is biodegradable. The manufacturer of Tencel™ was awarded with the European Business Award for the Environment 2000 for this sustainable development.

Unlike cotton, this fibre acquired from certified sustainable wood only requires a fraction of the amount of water during its production process. Tencel™ sets standards in terms of environmental protection – and is naturally also OEKO-TEX®-certified.

Environmentally friendly means skin friendly

This news is also good for your skin – especially in the sauna, where our mats, rolls and cushions come into direct contact with your skin at high temperatures. Tencel™ is ideal for people with allergies, is emission-free and, thanks to the natural product properties, offers optimal moisture management. This means that not only do the cushions feel pleasantly cool in the sauna, but that bacteria doesn't stand a chance.

INNER VALUE: INNOVATIVE

The inlay of the MOLLIS® sauna cushions and mats is a 3D spacer fabric produced with the latest precision weaving technology. It forms the core and inlay of the MOLLIS®. This innovative material has made it possible for the first time to use cushions and mats in the sauna with its challenging climatic conditions.

The structure of the finest pile yarns is characterised by very high air permeability and thermal insulation, low weight, long service life and permanent elasticity. The fabric is also washable, easy to disinfect, hypoallergenic and completely recyclable. All of these properties make it ideal for use in a sauna.

MOLLIS® & MORE

Do you love your new MOLLIS®?
You can order more MOLLIS® and relaxing accessories relating to sauna and pool at your regional KLAFS sales team.

NATURAL QUALITY – MADE IN GERMANY

For the sake of your health, we have opted to keep things natural and completely avoid adding any artificial resin when manufacturing MOLLIS® at a traditional weaving mill in Upper Franconia. So don't be surprised if one or two creases appear after you've washed your MOLLIS® covers

without any problems: this is the material's natural behaviour and guarantees you that you are enjoying your sauna with a genuinely natural product.

The sustainable MOLLIS® sauna cushions and mats are available in four colours:

CLEANING AND CARE

You should wash your MOLLIS® before using it for the first time!

For environmental reasons, we want to avoid doubling up on the use of water and detergent. As you are sure to want to wash your new MOLLIS® yourself before first using it in the sauna, we have not pre-washed our products.

Please note!

Before the first wash, the covers are bigger than the inlay! The reason for this is that the covers are made from the natural wood fibre Tencel™. Tencel™ shrinks more than e.g. cotton during the first wash at 60°C. We recommend washing the MOLLIS® covers at 60°C followed by 5 minutes in the tumble dryer. Pull covers onto the inlays whilst still damp and place on a drying rack to dry completely. The creases will automatically smooth out and the cover perfectly match the size of the inlay.

Cleaning covers

Wash up to max. 60°C, suitable for tumble dryers. It is recommended to iron the covers after washing and drying. Smoothing and stretching the fabric makes it easier to put the covers on the cushions and mats later on.

Cleaning inlays

Wash up to max. 60°C, not suitable for tumble dryers. Please hang up to dry and do not iron.

The inlay is significantly compressed when putting the covers on. To retain the very special properties of the air-permeable 3D spacer fabric, you should pull the inlay apart like an accordion after putting the covers on.

Wash separately

Please wash the cushion inlays, the inserts of the cushion inlays, the mats and the covers separately.

Enjoy your MOLLIS® for a long time to come

The service life will be extended if the inlays and covers are hung on the line to dry. Every unnecessary washing or drying process wears out the textile materials. To prevent odours, the washing should be dried well. Please use delicates and wool washing programmes with a mild detergent. MOLLIS® can be washed up to 60°C, but for energy-saving reasons we recommend a washing temperature from 30°C to max. 40°C.

KLAFS hopes you enjoy many relaxing and comfortable hours with MOLLIS® sauna mats and cushions in your sauna.
